EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Tony Chen on November 10, 2003.

The application has been amended as follows:

- A) In claim 1, line 5, change "propagating" into --- propagate ---.
- B) In claim 1, line 11, change "its direction" into --- the direction of said substantially horizontal force ---.
- C) In claim 1, line 14, delete the word "floating".
- D) In claim 1, line 15, after the word "propeller" insert --- that is driven by said float due to said float moving back and forth in said substantially horizontal direction as a result of said substantially horizontal force and said propeller ---.
- E) In claim 29, line 5, change "propagating" into --- propagate ---.
- F) In claim 29, line 12, change "its direction" into --- the direction of said substantially horizontal force ---.

G) In claim 29, line 15, after the word "propeller" insert --- that is driven by said float due to said float moving back and forth in said substantially horizontal direction as a result of said substantially horizontal force and said propeller ---.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: the prior art discloses an apparatus for extracting energy from waves in a liquid body having a device placed in the liquid body and having a float with excess buoyancy.

However, the prior art fails to show, in combination with the invention and in light of the specifications, a device being beneath the liquid body and a holding means exerting a primarily downward force on the float while allowing the float to move back and forth in a horizontal direction as a result of horizontal force which is a combination of the holding force and the buoyant force and changes its direction back and forth in response to fluctuating pressure in the region of the float that is associated with the waves of the liquid body and including at least one propeller being driven by the float due to the float moving horizontally back and forth and the propeller driving an electric generator for generating electricity as the float moves back and forth in the liquid body.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
